## Jeti CYCLONE LIQUID LAMINATOR

### Jeti Cyclone Liquid Laminator

The **Jeti Cyclone Liquid Laminator** coating machines are designed specifically for the flatbed printer market. Available in both 60" and 80" coating width, the units provide high speed, dry to dry protective lamination for digital ink-jet images printed with various types of inks including UV, Solvent, and Water-based. The units coat both flexible and rigid substrates up to 3" thickness. They feature super sized rollers to assure precise, full width, edge to edge coating with a speed range from 30 feet to 110 feet per minute. Coating thickness is adjustable from 0.3 mils to 0.8 mils. The built in triple liquid delivery system handles two liquids and a cleaning fluid. All three liquids are filtered. The liquid metering roller and bottom roller scraper are pneumatically controlled. The machines also feature an ingenious, 9 nozzle air separator system to allow light weight materials to be coated without sticking problems.
